Dear Parent,

Re: Head Lice Outbreak
Unfortunately, the school is experiencing a head lice outbreak.

Finding Head Lice
We are asking all parents to examine their child’s hair for signs of lice or nits (eggs). Lice are hard to find as they move around the head. We are therefore suggesting that parents look for nits. Nits look very similar to dandruff and gather as tiny silver white eggs at the base of the hair shaft.

To assist with the examining of the child’s hair we recommend that the following steps be taken:

1. To stun the lice and make it difficult for them to grip the hair, comb the child’s hair with a detection/removal product such as MOOV Head Lice Combing Conditioner.
2. Using a fine tooth metal comb, comb sections of the hair with the product.
3. Wipe the conditioner from the comb onto a paper towel or tissue.
4. Look on the tissue and the comb for lice & eggs.
5. Combi through every part of the head at least 6 times

If any lice or nits are found, the child’s hair should be treated.

Treatment of Head Lice
Please do not be alarmed if your child has contracted head lice. Although the condition is frustrating, it is easily treated with a specialised product like MOOV Head Lice Solution, which is available at your local pharmacy.

Moov Head Lice Solution, is a natural remedy which has been clinically proven to be twice as effective* as the leading chemical treatments on the market, when you follow the instructions on the pack.

As with all medicines it is important to follow the directions on the pack carefully for best results.

Yours sincerely,

Pharmacy 777 Pharmacist.
